

# Introducing the Bokeh Server

INTERACTIVE DATA VISUALIZATION WITH BOKEH

**Bryan Van de Ven**  
Core Developer of Bokeh

# Basic app outline

outline.py

```
from bokeh.io import curdoc

# Create plots and widgets

# Add callbacks

# Arrange plots and widgets in layouts

curdoc().add_root(layout)
```

# Running Bokeh applications

Running single module apps at the shell or Windows command prompt:

```
bokeh serve --show myapp.py
```

"Directory" style apps run similarly:

```
bokeh serve --show myappdir/
```

# Let's practice!

# A slider example

slider.py

```
from bokeh.io import curdoc
from bokeh.layouts import column
from bokeh.models import ColumnDataSource, Slider
from bokeh.plotting import figure
from numpy.random import random

N = 300
source = ColumnDataSource(data={'x': random(N), 'y': random(N)})

# Create plots and widgets
plot = figure()
plot.circle(x='x', y='y', source=source)

slider = Slider(start=100, end=1000, value=N,
                step=10, title='Number of points')
```

# A slider example

slider.py

```
# (continued)

# Add callback to widgets
def callback(attr, old, new):
    N = slider.value
    source.data={'x': random(N), 'y': random(N)}

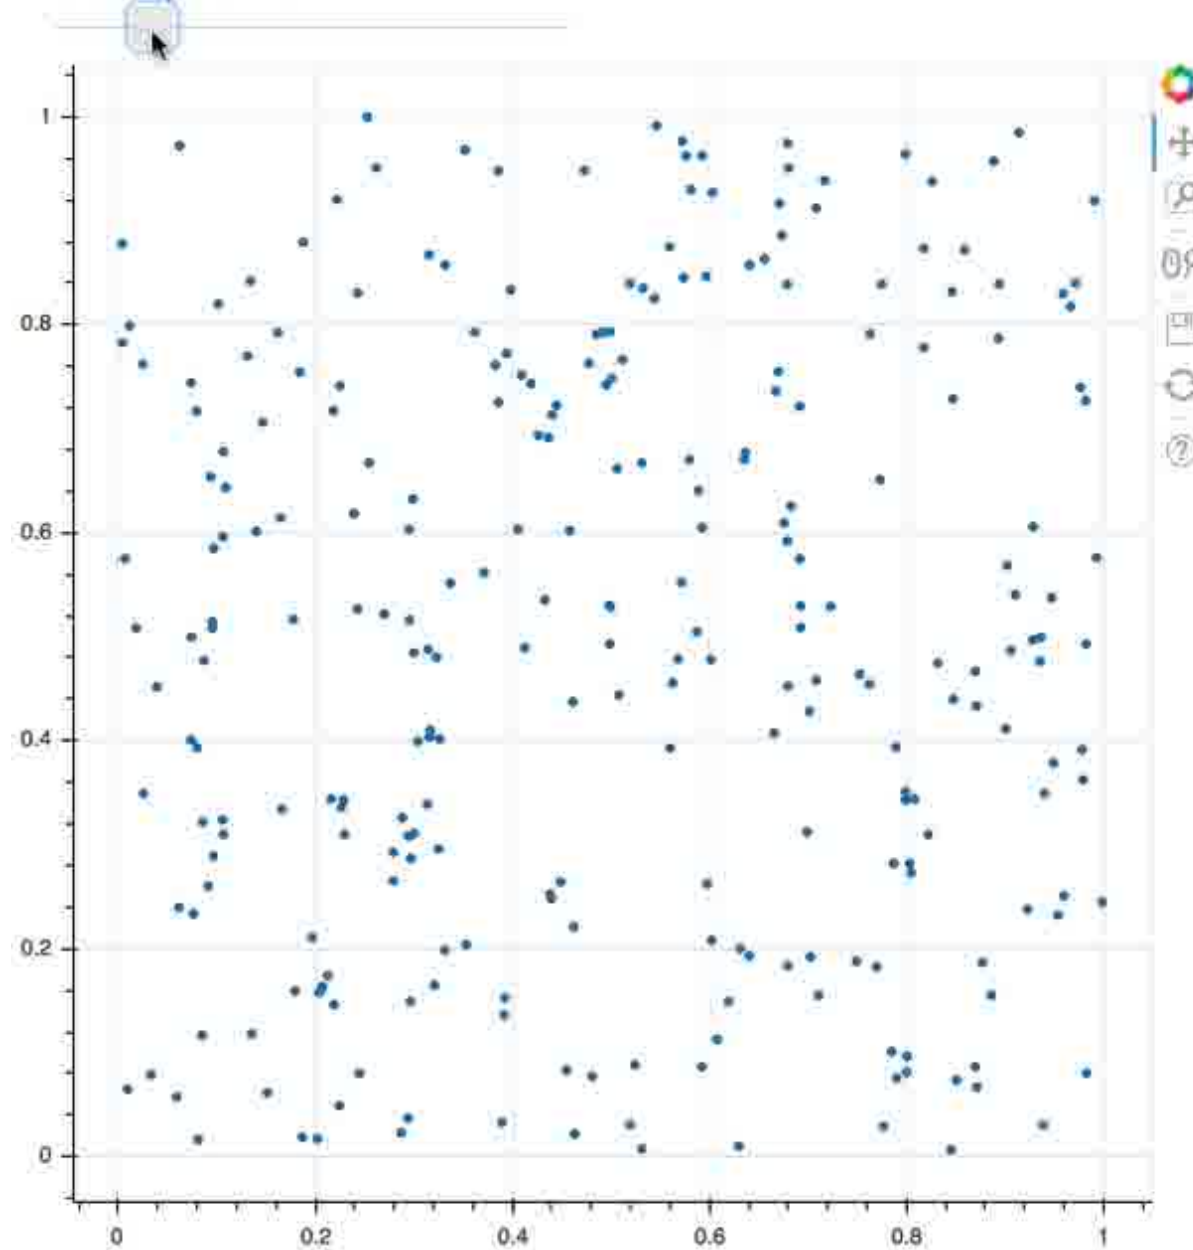

slider.on_change('value', callback)

# Arrange plots and widgets in layouts
layout = column(slider, plot)

curdoc().add_root(layout)
```

Number of points: 270

# Let's practice!
